

**ACCELERATE WITH  
CONFIDENCE**

## **Change Control for the Enterprise Cloud**

Mitigate the Risk to  
**Stability, Compliance, and Security**  
Without Sacrificing Speed

### **Stability, Compliance, and Security Risks.**

The adoption of the cloud and DevOps has had profound implications for application and service operations in the enterprise.

A major focus on pushing changes at ever higher speeds into dynamic environments has violated the balance between agility and control, leaving stability, compliance, and security at risk.

### **Change Control for the Enterprise Cloud.**

After tracking all **actual changes** made in the end-to-end enterprise cloud environment, Evolven employs machine learning analytics to analyze these changes, correlate them with data drawn from your DevOps, CI/CD, and cloud management tools, and assess their risk.

This solution provides CloudOps, DevOps, IT Ops, and IT Risk & Compliance teams with precisely the actionable insights they require for troubleshooting and preventing performance, stability, compliance, and security issues before the trouble starts.

# How Evolven Helps.

- 1 **Complete, Granular Change Awareness** of all **actual** changes within your enterprise cloud environment and applications, including full change **traceability** and an **audit trail**.
- 2 **Automatic Change Reconciliation** and **Change Request Generation and Approvals**, driven by machine learning analytics.
- 3 **Early Detection of Risky Changes** through notifications of high-risk changes impacting performance, compliance, or security in the early stages of the change promotion, well before the trouble starts.
- 4 **Accelerated Troubleshooting** thanks to receipt of a prioritized, short list of changes that caused the issue.
